Abstracts

Busway, also known as bus duct, is an electrical power supply distribution system that seamlessly distributes power from one end of the building to another. A key advantage of busway is its flexibility and adaptability to a wide range of requirements. It is widely used in industrial buildings, commercial building, civil building etc.

Busway provides flexible power distribution solutions for a variety of applications where change and adaptation are important. It offers a complete line of compatible, sandwich-type feeder and plug-in busway lengths and fittings. According to the different insulation way, busway is divided into BMC, CMC and CFW etc. CMC is the most widely used type which takes up about 52% of the global total in 2016. And the production cost of CMC is relatively low.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
