Abstracts

Calcium is the most abundant mineral in the body. Between one and two percent of body weight is calcium—the average male has about three pounds of calcium; the average female contains about two pounds—and nearly all of it—99%—is concentrated in the bones and teeth. The remaining one percent is in the cells of the body, blood, and extracellular fluid (the fluid between cells)

According to QYResearch's new survey, global Calcium Tablet and Oral Liquid market is projected to reach US\$ 5724.4 million in 2029, increasing from US\$ 3546.1 million in 2022, with the CAGR of 6.7% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Calcium Tablet and Oral Liquid market research.

The calcium supplements market is primarily driven by the increasing awareness of bone health and the role of calcium in maintaining strong bones and preventing osteoporosis. Calcium supplements provide a convenient way for individuals to meet their daily calcium requirements, especially for those who have dietary limitations or reduced calcium intake. The growing aging population, coupled with the need to prevent bone-related conditions, contributes to market growth. Moreover, the emphasis on preventive healthcare and the availability of various formulations, including chewable tablets and liquid supplements, further propels adoption. However, challenges include addressing concerns about proper absorption of calcium supplements and the potential for gastrointestinal side effects. Striking a balance between calcium intake from supplements and dietary sources, and ensuring compatibility with other medications, are ongoing concerns. The market's success relies on continuous research into calcium supplement formulations, patient education on proper usage, and collaborations

between supplement manufacturers and healthcare providers to offer effective, safe, and easily accessible calcium supplements while addressing the evolving challenges associated with bone health and supplementation.
