Abstracts

Car rearview mirror is a mirror in automobiles and other vehicles, designed to allow the driver to see rearward through the vehicle's backlight. It is an important auto part in vehicles for the safety of drivers. The mirror is not ground flat -- the front glass surface is at an angle to the back (mirrored) surface. So if you looked at this mirror out of its casing, it would be wedge-shaped with the thicker edge at the top.

Due to the fast development of vehicles industry, Chinese market is becoming the most important market in the world. Many foreign car rearview mirror manufacturers enter into Chinese market by investment or joint venture with domestic companies. The growing China vehicle market brings a big scale demand to the car rearview mirror industry. In the past years, the rearview mirror industry kept in a rapid development and the industry will still stay in a fast step in future.

As the development of the car rearview mirror, electric adjustment function is gradually applied in the product and other additional functions are required to add to the rearview mirror. In future, the rearview mirror will become more intelligent.

To grab more market, the domestic companies have to expand the technology, capital investment and brand influence. To meet the challenge of the domestic companies and keep their leading stage, foreign companies need to increase the technology innovation and speed up the product upgrading. In the future, China will be a market of fierce competition.
