Abstracts

Cell Culture Media are used to provide nutrients for cells growth in research, diagnostic and manufacturing applications. Typical cell culture media contain a mixture of defined nutrients dissolved in a buffered physiological saline solution. In cell culture, media are used to facilitate the growth of cells. Media are water-based liquids that can be provided in liquid or in dry powder format. Dry powder media has to be hydrated with water or with process liquids. Process liquids are water-based buffers and saline solutions which facilitate the cell culture process and ensure that the cell culture environment remains at a constant pH.

In the next few years, Cell Culture Media industry will maintain increasing at a relatively high growth rate. Investors are still optimistic about this area; the future will still have more new investment enter the field.

The global average price of Cell Culture Media is in the decreasing trend, and the average price is 56.7 USD/L in 2015. With the situation of global economy and the investment of technology, the price will be decreasing trend in the following five years.
