Abstracts

This report studies the global Cell Harvesting market status and forecast, categorizes the global Cell Harvesting market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, Asia-Pacific, South America, and Middle East & Africa.

Cell harvesting usually for use in cancer or other treatment. Usually the cells are removed from the patient's own bone marrow. Stem cells can be harvested from the blood or bone marrow. Umbilical cords have been saved as a future source of stem cells for the baby.

By region, the global cell harvesting market is segmented into North America, Europe, Asia Pacific, and the Rest of the World (RoW). While North America held the largest share of the market in 2017, Asia Pacific is expected to register the highest CAGR during the forecast period. As increasing R&D expenditure helps in the development of new treatment solutions, supportive government policies for stem cell research and increasing public-private initiatives to encourage public adoption of stem cell-based treatment in the Asia Pacific countries are driving the growth of the market in this region. The potential use of stem cells in regenerative medicine, such as in case of cancer, trauma, congenital diseases, etc., is also one of the factors contributing to the demand for stem cells for research, thereby contributing toward growth of cell harvesting system market across the globe. The rising prevalence of certain diseases such as cancer is expected to drive the growth of this market over the forecast period.

The global Cell Harvesting market is valued at 210 million US\$ in 2017 and will reach 400 million US\$ by the end of 2025, growing at a CAGR of 0.087 during 2018-2025.
