Abstracts

This report studies the global Cell Signaling market status and forecast, categorizes the global Cell Signaling market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, Asia-Pacific, South America, and Middle East & Africa.

Cell signaling (cell signalling in British English) is part of any communication process that governs basic activities of cells and coordinates all cell actions. The ability of cells to perceive and correctly respond to their microenvironment is the basis of development, tissue repair, and immunity, as well as normal tissue homeostasis. Errors in signaling interactions and cellular information processing are responsible for diseases such as cancer, autoimmunity, and diabetes. By understanding cell signaling, diseases may be treated more effectively and, theoretically, artificial tissues may be created.

The cell signaling consumables segment is estimated to account for the largest share of the cell signaling market in 2017. The increasing number of cell signaling research activities and rising incidence of chronic diseases are some of the major factors contributing to the segments large market share.

The global Cell Signaling market is valued at 2530 million US\$ in 2017 and will reach 4280 million US\$ by the end of 2025, growing at a CAGR of 6.8% during 2018-2025.
