Abstracts

This report studies the global Cellulose Fiber market status and forecast, categorizes the global Cellulose Fiber market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in North America, Europe, Japan, China and other regions (India, Southeast Asia, Central & South America, and Middle East & Africa).

Cellulose fibers are fibers made with ether or esters of cellulose, which can be obtained from the bark, wood or leaves of plants, or from a plant-based material. Besides cellulose, these fibers are compound of hemicellulose and lignin, and different percentages of these components are responsible for different mechanical properties observed.

Asia-Pacific dominated the cellulose fiber market in 2014 and accounted for over 68% of the market, by volume and value. Country-wise, China is the top market of cellulose fibers in the world. Europe is the second-largest cellulose fibers market in the world.

Cellulose fibers have various applications such as apparel, home textile, industrial, and others. The growth of the market hinges heavily on the developing economies, especially, Asia-Pacific and RoW. China, Japan, and India, especially, stand out as significant emerging markets, given the mass exodus of production activities from developed countries to low-cost Asian countries. The increase in foreign investments and rise in the number of new manufacturing establishments is propelling Asia-Pacific to emerge as the major driver of growth of the global cellulose fibers market.

The global Cellulose Fiber market is valued at 26200 million US\$ in 2017 and will reach 53200 million US\$ by the end of 2025, growing at a CAGR of 9.3% during 2018-2025.
