Abstracts

Ceramic Fiber is a fibrous refractory material, a light weight, high temperature, good thermal stability, low thermal conductivity, specific heat of small and resistance to mechanical shock, etc.

Luyang Energy-Saving Materials, Morgan Thermal Ceramics, and Unifrax captured the top-three revenue share spots in the Ceramic Fiber market in 2015.

In the next five years, the global consumption of Ceramic Fiber will increase, production is expected in 2020 will be 2589.1 (K MT).

In 2014, EU, US, Russia, Brazil, Japan and Australia and other countries had developed a national wide network plans, but subject to the financial crisis and weak economic recovery after the debt crisis, European fiber optic network construction and development is still relatively slow.

Due to the promoting of China's fiber-optic broadband network construction, the downstream demands recovered and the Ceramic Fiber expanded rapidly.

With the rapid growth of the national economy as well as the rapid development of downstream industries, Chinese Ceramic Fiber market demand is exuberant, provide a good opportunity for the development of Ceramic Fiber market and technology.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this areas, the future will still have more new investment enter the field. Technology and cost are two major problems.

Although Ceramic Fiber brings a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
