## Abstracts

Frit is a ceramic composition formed by fusing inorganic materials into a glass by heating them in smelters and quenching them in water. Frits are the main component of nearly all ceramic glazes and are present in many compositions of different materials where a glass face is needed, even if only as a binder. The multiple applications, and various baking methods of the products which are used, under different names, have made it so that over the years the Frits family has gained numerous members, many of them very different between themselves.

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Ceramic Frit industry in short supply on the market in the past few years, more and more companies enter into Ceramic Frit industry, the current demand for Ceramic Frit product is relatively low, lack of demand, excess supply. Ordinary Ceramic Frit products on the market do not sell well; Industrial Naphthalene's price is lower than past years. The signal of market price change indicates the trend in the Ceramic Frit industry, low-end product has excess capacity, high-end product is in short supply.
