Abstracts

This report studies the global Ceramic Inks market status and forecast, categorizes the global Ceramic Inks market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in North America, Europe, Japan, China and other regions (India, Southeast Asia, Central & South America, and Middle East & Africa).

Ceramic inks are carriers of ceramic fine particled metallic oxide pigments that are used to decorate ceramic tiles and plain glasses. These inks enhance the attractiveness of the surface on which they are used. Ceramic inks are expected to possess physical consistency appropriate for producing adequate detail and hence are suspended in a thick medium. Analog printing and digital printing are the major technologies of ceramic inks.

Demand for ceramic inks is projected to increase due to expansion of end-user industries such as automobile and construction. Growth in the construction industry in emerging economies of Asia Pacific and Middle East & Africa is also likely to boost the demand for ceramic inks. Furthermore, demand for automobiles has increased significantly in India and China, two of the major economies in Asia Pacific. This is likely to further propel the demand for ceramic inks. Growth in modern digital printing technologies that employ ceramic inks is expected to provide new opportunities for long lasting decorations and optical effects on glass. However, availability of substitutes and fluctuation in prices of raw materials may hamper market growth.

The global Ceramic Inks market is valued at 1830 million US\$ in 2017 and will reach 3150 million US\$ by the end of 2025, growing at a CAGR of 7.0% during 2018-2025.
