Abstracts

This report studies the global Ceramic Substrates market status and forecast, categorizes the global Ceramic Substrates market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in North America, Europe, Japan, China and other regions (India, Southeast Asia, Central & South America, and Middle East & Africa).

Ceramic substrates are used for a wide range of applications in electronics including thin and thick film microelectronics, high power and high frequency circuit, RF/microwave components and capacitors or resistors. For such applications, the ceramic substrates should possess good mechanical strength and abrasion resistance, high thermal conductivity, excellent electrical insulation and stability in high temperature and corrosive chemical environments.

The market is mainly driven due to the characteristic properties of ceramic substrates, such as high-temperature stability, corrosion-resistance, lightweight, low thermal expansion, and a variety of electrical properties ranging from semiconductors to highly conductive materials. Owing to these properties, ceramic substrates are used in a wide range of end-use industries, such as consumer electronics, automotive, industrial, and telecom.

The global Ceramic Substrates market is valued at 5970 million US\$ in 2017 and will reach 9520 million US\$ by the end of 2025, growing at a CAGR of 6.0% during 2018-2025.
