Abstracts

This report studies the global Chip On Flex (COF) market status and forecast, categorizes the global Chip On Flex (COF) market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Chip-on-Flex, or COF, refers to the semiconductor assembly technology wherein the microchip or die is directly mounted on and electrically connected to a flexible circuit (a circuit built on a flexible substrate instead of the usual printed circuit board). Thus, in a COF assembly, the microchip doesn't have to go through all the traditional assembly steps required for individual IC packaging. This simplifies the over-all process of designing and manufacturing the final product while improving its performance as a result of the shorter interconnection paths.

COF is the role of product through the flexible substrate and connected to on-chip liquid crystal panel, the liquid crystal panel and the control chip driver current, voltage, thus changing the state of the liquid crystal display different screens. Currently, COF products are widely used in LCD TVs, smart 3G phones and laptop computers and other products with LCD display driver.

Driven by a growing range of applications in the automotive, industrial, military, aerospace, computer, telecommunication, consumer electronics, and medical electronics industries, miniaturization and the use of flex circuits continue to be of prime interest to electronics manufacturers.

In China, COF manufactures mainly include Danbond Technology, AKM Industrial, Compass Technology Company and others. China is the world's third producer of COF and the world's biggest consumption market.

The global Chip On Flex (COF) market is valued at 1490 million US\$ in 2017 and will

reach 2030 million US\$ by the end of 2025, growing at a CAGR of 4.5% during 2018-2025.
