Abstracts

Chiral separation column is an instrument used in chiral column chromatography which can separate chiral isomers (enantiomeric compounds).

Chiral column chromatography is a variant of column chromatography in which the stationary phase contains a single enantiomer of a chiral compound rather than being achiral. The two enantiomers of the same analyte compound differ in affinity to the single-enantiomer stationary phase and therefore they exit the column at different times. Chiral separation column has a high concentration. The top four companies account for more than 84.51 % of market share. Daicel Corporation, Agilent Technologies, Merck (Sigma-Aldrich) and YMC are the tycoons of chiral separation column. Daicel Corporation is the largest manufacturer, with the market share of 58.23% in 2015. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Chiral Separation Column 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
