Abstracts

Chitosan is a derivative of chitin obtained by treating the chitin in a concentrated sodium hydroxide bath at elevated temperature. Chitosan, which is soluble in acidic aqueous media, is used in many applications (food, cosmetics, biomedical and pharmaceutical applications).

Chitosan is extracted from chitin, insoluble in water but soluble in dilute acid and absorbed by human body. As the first derivative, its chemical constitution is macromolecule alkaline polysaccharide polymer with cation. It has peculiar physical, chemical properties and bioactive function.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
