Abstracts

This report studies the global Chlorinated Polyethylene market status and forecast, categorizes the global Chlorinated Polyethylene market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in North America, Europe, Japan, China and other regions (India, Southeast Asia, Central & South America, and Middle East & Africa).

Chlorinated polyethylene (PE-C) is an inexpensive variation of polyethylene having a chlorine content from 34 to 44%. It is used in blends with polyvinyl chloride (PVC) because the soft, rubbery chlorinated polyethylene is embedded in the PVC matrix, thereby increasing the impact resistance. In addition, it also increases the weather resistance. Furthermore, it is used for softening PVC foils, without risking plasticizer migration. Chlorinated polyethylene can be crosslinked peroxidically to form an elastomer which is used in cable and rubber industry. When chlorinated polyethylene is added to other polyolefins, it reduces the flammability. Chlorinated polyethylene is sometimes used in power cords as an outer jacket.

The Asia-Pacific region led the global chlorinated polyethylene market due to the increasing demand for chlorinated polyethylene from various end-use industries, such as building & construction, wires & cables, and automobiles, among others. Growth in the Asia-Pacific chlorinated polyethylene market can also be attributed to the fact that China is the world leader in the production as well consumption of chlorinated polyethylene, followed by India.

The global Chlorinated Polyethylene market is valued at 460 million US\$ in 2017 and will reach 840 million US\$ by the end of 2025, growing at a CAGR of 7.8% during 2018-2025.
