Abstracts

(Chloro)-dimethylsilane (CAS 1066-35-9) is an organic silicon substance. It is soluble in aromatic hydrocarbons and petroleum hydrocarbon solvents. When encountering with water or alcohol, it undergoes decomposition drastically. The product analysis is gas chromatography

Chlorodimethylsilane is a highly volatile and extremely flammable liquid. It reacts violently with water, rapidly breaking down to give dimethylsilanol and then dimethylsilanediol. The by-products of these reactions are hydrogen chloride and hydrogen; hydrogen is an extremely flammable gas.

The substance is not suitable for use by the general public. The applications described take place in industrial settings or academic laboratories under highly controlled conditions. Although the end uses of products made from chlorodimethylsilane will vary, it can be assumed that due to its highly reactive nature, no residual unreacted material will be present in any of the final products.

The technical barriers of chlorodimethylsilane are relatively high, and chlorodimethylsilane as intermediate are used to produce silicones in industry chain, resulting there are few enterprises to supply chlorodimethylsilane in the circulation market. Companies include Dowcorning, PCC Group, Jiande Zhiyou Silicone Materials, and Shanghai Chuqing Organosilane.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
