## Abstracts

Chlorogenic acid (CGA) is a natural chemical compound which is the ester of caffeic acid and (?)-quinic acid. It is an important biosynthetic intermediate. Chlorogenic acid is an important intermediate in lignin biosynthesis. This compound, known as an antioxidant, may also slow the release of glucose into the bloodstream after a meal. The term chlorogenic acids can also refer to a related family of esters of hydroxycinnamic acids (caffeic acid, ferulic acid and p-coumaric acid) with quinic acid. Chlorogenic Acid and other caffeoyl esters are among the most potent free radical scavengers found in plant tissues. Chlorogenic Acid has a very high alkyl peroxy radical scavenging activity. Compared to about eighteen other compounds, (including quercetin, gallic acid, alpha-tocopherol), chlorogenic acid was only second to rutin. According to literature reports, in particular, the inhibitory potency of chlorogenic acid on ONOO-scavenging (peroxynitrite radical) is considerable when compared with other metabolites, natural products or synthetic compounds. Chlorogenic Acid is therefore a natural antioxidant with potential applications in antiaging compositions and in compositions that provide active protection against oxidation, and damage by free radicals.

The industry's leading producers are Naturex, EUROMED SA and Applied Food Sciences, with revenues of 16.08%, 5.73% and 6.09%, respectively, in 2019. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Chlorogenic Acid 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight

cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Chlorogenic Acid 3900 industry.

Based on our recent survey, we have several different scenarios about the Chlorogenic Acid 3900 YoY growth rate for 2020. The probable scenario is expected to grow by xx% in 2020 and the revenue will be xx in 2020 from US\$ 135.1 million in 2019. The market size of Chlorogenic Acid 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
