## Abstracts

Chlorosilane is a group of reactive, chlorine-containing chemical compounds, related to silage and used in many chemical processes. Each such chemical has at least one silicon-chlorine bond. Chlorosilane mainly applied to polycrystalline silicon and organosilicons.

Chlorosilane industry belongs to a part of the chemical field and it also is dangerous chemicals. So the industry has more influence on the environment. It needs much more research on the Chlorosilane product, the performance of the product abroad is better than the developing countries.

The production and the capacity of chlorosilane product are decreasing from 2010 to 2015. The application of Chlorosilane is relatively limited all over the world.

The price of chlorosilane is lower year by year from 2011 to 2015; its price is lowest in 2012 and from then on, the price is relatively stable year by year. The price is at about 750-800 USD/MT in 2015. The product profit margin is about 15-20% and it also descends in recent years. Many manufacturers close down in 2012 because of ultra-low profit margins.

The main production areas are in China, USA and Europe while the main consumption areas also in those areas, China is the largest consumption and production areas, but the performance of the product is good in USA, the export and import of chlorosilane product is little and this is because that the product belongs to dangerous chemicals, every countries have strict requirements on its transportation

There are many manufacturers producing chlorosilane in the world before 2012 and also many research and development institutions are researching and development on the chlorosilane product. The largest company occupies about 14% which is the most part of the production of chlorosilane.

It is expected that less and less manufacturers enter into this field, the capacity and the production will be decreasing steady, global growth rate is at about 10% while China growth rate is at about 16%, China will occupy more large share in production of chlorosilane. The downstream manufacturers are developing the upstream industry, it

will be expected that the major company will have the whole industry chain, the chlorosilane industry that only manufacturing this product may disappear. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Chlorosilane 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Chlorosilane 3900 industry.

Based on our recent survey, we have several different scenarios about the Chlorosilane 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 2256.8 million in 2019.
