## Abstracts

Chlorosulfonated polyethylene (CSM) is a kind of white or light color elastomer which is characterized by its own unique properties as well as the same characteristics as the raw rubber. In aromatic and chlorine hydrocarbons, it can be soluble, but in ketones and ether, it can be only swelling, not soluble.

The chemical structure bond of CSM is completely saturated, so the vulcanizate has excellent properties, such as ozone resistance, weather and aging resistance, chemical resistance, ionizing radiation resistance, colorability, good physical and mechanical properties, thermal aging resistance, heat and low temperature resistance, flame retardancy, abrasion resistance and wonderful electric insulation, etc.

At present, the Chlorosulfonated Polyethylene Industry market concentration is high, there are only five producers distributed in Japan and China, four in China and one in Japan. Tosoh is the largest producer and dominates over the world. After DuPont shut down its production facilities in 2010, the market gap was very big and Tosoh expanded its production capacity, and there three Chinese newcomers entered this industry, to fill the market vacancy. So the production capacity increased rapidly in the past five years and it will keep this growth trend in the few future years.

The high-low products are almost produced by Tosoh, and the low-end products are from Chinese producers. Chinese producers can't produce the pollution-free products due to the backward production technology. Tosoh exports approximately 80% CSM products to the world.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Chlorosulfonated Polyethylene (CSM) 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting

production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
