Citral (C₁₀H₁₆O), also called 3,7-dimethyl-2,6-octadienal, a pale yellow liquid, with a strong lemon odour, that occurs in the essential oils of plants. It is insoluble in water but soluble in ethanol (ethyl alcohol), diethyl ether, and mineral oil. It is used in perfumes and flavourings and in the manufacture of other chemicals. Chemically, citral is a mixture of two aldehydes that have the same molecular formula but different structures. In consumption market, the global sales value decreases with the 1.78% average growth rate. Europe and China are the mainly consumption regions due to the bigger demand of downstream applications. In next two or three years, the production of citral would increase rapidly, which results from BASF putting into production in Malaysia and Zhejiang NHU new project of citral. So the international competition would be much keener. And then the price and gross would decrease. We predicted that the citral industry would present excess capacity status, while the demand exceeds supply recently.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
