Climate Chambers are environmental testing devices used for various types of testing such as prototype evaluation, research & development testing, production testing, accelerated stress testing, reliability testing, failure analysis, and any other application where environmental simulation is needed.

An environmental test chamber artificially replicates the conditions under which machinery, materials, devices or components might be exposed. It is also used to accelerate the effects of exposure to the environment, sometimes at conditions not actually expected.

The most prominent feature of modern marketing is the e-commerce. E-commerce is the buying and selling of goods and services over an electronic network, primarily the internet. These business transactions occur either as business-to-business (B2B), business-to-consumer (B2C), consumer-to-consumer or consumer-to-business. As the fast development of internet Machinery & Equipment Research Center, E-commerce is becoming more and more popular. Most manufacturers have built their sales website or operated an official sales store in the ecommerce platform. E-commerce can decrease the investment on solid stores and manufacturers can get the market sales conditions easily as the sales data can be counted easily.

The global Climate Test Chamber market is valued at 670 million US\$ in 2017 and will reach 830 million US\$ by the end of 2025, growing at a CAGR of 2.7% during

2018-2025.
