Cloud computing describes wide range of useful services.
For example, cloud computing allows you to move compute and data services off-site to a location-transparent facility.
Cloud-based data can be made accessible via the Internet anytime, anywhere and is often less costly than locally hosted data.
To decide how you – or your organization – will use cloud computing to best advantage, it is important to understand the services that make up cloud computing.
The three major categories of services are Software as a Service (SaaS), Platform as a Service (PaaS), and Infrastructure as a Service (IaaS).
At present, the consumption market of Cloud Computing Stack Layers is concentrated in UK, Germany, France, Benelux, Italy, Spain and Russia. UK is the largest consumption area in the world, which occupied about 25.33% European market in 2016. The following areas are Germany and France.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Cloud Computing Stack Layers market in 2020.
COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
