Abstracts

Cocamine Oxide is a tertiary amine oxide; it is colorless to pale yellow viscous liquid. It is as foam booster and stabilizer used in cosmetic industry. They are used as nonionic surfactants impart excellent viscosity enhancing and foam stabilization in anionic based systems like hand washing liquids, shampoos, body washes and other personal care products. They act as lubricant agent, thickening agent and wetting agent.

The Cocamine Oxide industry concentration is not very high; there are many manufacturers in the world, and high-end products mainly from Japan, Americas and Europe. In the world wide, giant manufactures mainly distribute in Americas and China such as Solvay, Kao Chemicals, Stepan Company and Clariant.

Due to the wide downstream consumption of the Cocamine Oxide, it should have large production share in daily chemical products, it has many substitute goods and the production of cocamine oxide is not very large. There are a few companies with several plants. Recent years, there are some companies starting to research and development the product. The industry will form a much high concentration of global market competition in future. At present, the top five companies account for about 40% of global market share in Cocamine Oxide field.

After decades of development, the giant manufacturers have proven technique. The Cocamine Oxide industry in China developed in about 1990s but the technology level of this product is not high.

The technological level of Cocamine Oxide in China has a big gap compared with the international advanced level. Outstanding performance in product application performance is not outstanding, function is not strong, supporting enough, clean low level, product updates slow, long development cycle. There is little Cocamine Oxide performance in China at or near the international advanced level.

The global production and capacity of Cocamine Oxide are fluctuant in a small range in the past five years; the capacity is from about 93000 to 114000 MT while the production

is from 77000 to 94000 MT. It is expected that it will increasing in future. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Cocamine Oxide 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Cocamine Oxide 3900 industry.
