Commercial baggage handling system is an integral part of any commercial airport and the operational efficiency of an airport is largely dependent on this system. A smartly designed baggage handling system helps in improving passenger convenience while reducing the aircraft turnaround time. This system includes conveyors, identification devices, screening devices, sortation devices, and destination-coded vehicles.

The commercial baggage handling system in this report refer to the whole set of designing, engineering, manufacturing, integrating, and installing complete baggage handling systems used in the airport. It don't include the separate component.

Essentially, there are two basic approaches to developing a sorting system solution.

You can view sortation as a standalone operation sorting products or orders into consolidation lanes, or as an integrated component of an overall logistics solution. The latter is the most comprehensive because it takes into consideration all possible product mixes from all production areas. Typical, such systems consist of a mix of materials handling equipment and controls that are tied together through a Warehouse Management System (WMS).

Operational constraints requiring evaluation may include: product weight, case/package size, weight and handling characteristics, required throughput capacity (cases per minute), footprint and system configuration. Once business and physical requirements have been considered, the next step is to determine what level of sortation is needed.

The global Commercial Baggage Handling System market is valued at 3990 million US\$ in 2017 and will reach 6650 million US\$ by the end of 2025, growing at a CAGR of 6.6% during 2018-2025.
