Abstracts

A composite filling can be used to restore a cavity in a decaying tooth, to repair a chipped tooth or broken tooth, to replace amalgam fillings or for decreasing the gap between teeth with dental bonding.

According to QYResearch's new survey, global Composite Dental Restoration Material market is projected to reach US\$ 1263.7 million in 2029, increasing from US\$ 900 million in 2022, with the CAGR of 5.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Composite Dental Restoration Material market research.

The dental restorative material market is driven by the increasing prevalence of dental diseases and the growing demand for aesthetic dental procedures. As the global population ages, the incidence of dental caries and tooth decay rises, leading to a higher demand for restorative materials. Moreover, the rising awareness of oral health and the desire for natural-looking dental restorations fuel the demand for advanced materials that provide both functionality and aesthetics. Additionally, technological advancements in restorative materials, such as the development of resin-based composites and ceramic materials, further stimulate market growth. However, challenges exist, including the high cost of advanced materials, the need for continuous research to improve material properties and longevity, and the varying regulations governing dental products in different regions. Addressing these challenges and providing cost-effective, durable, and biocompatible materials will be essential for the sustained growth of the dental restorative material market.
