Composite LPG cylinder has a huge variety of uses, most significantly domestic use. It is suitable for both indoor and outdoor use, including caravans, camping and barbecues. Moreover, it is employed across many different sectors such as transportation, hot air balloons, construction, recreation, hospitality, agricultural, calefaction and fishing.

In the past several years, the global composite LPG cylinder market is relatively stable with a Compound Annual Growth Rate of 9.86%. In 2015, the global actual production of composite LPG cylinder is about 5840 K Units, with a total capacity of nearly 7800K Units.

Due to the regulations in Europe and North America, the composite LPG cylinder industry is relatively concentrated, the manufacture technology of steel cylinder is highly mature, while the market of composite cylinder is in fast growth, which has been taking a noticeable market share for more than ten years. However, in China, the composite LPG cylinder is not that popular,

The composite LPG cylinder can be used in different fields, like home use and automotive, institutions & commercial applications, etc. Kitchen and domestic use is the largest application of composite LPG cylinder.

The two largest producers of LPG cylinder in the world are Hexagon Ragasco and Aburi Composites, which takes a combined share of 35.90% in 2015.

Due to the superior performance of composite LPG cylinder, the steel LPG cylinder must be replaced by composite LPG cylinder gradually. And with the development of

technology, there will be better materials to be developed. So the current material also has the danger of replacement.
