Abstracts

Constant Temperature Incubator is suitable for general bacterial culture and closed cell culture, and is often used for pre-heating of cell culture equipment and reagents. The heating tube heats the water in the interlayer, and uses the convection of water to form four-sided heating, which effectively guarantees the uniformity of heating. The water jacket can still maintain a good constant temperature when power is cut off. It adopts microcomputer intelligent temperature controller and bimetallic regulator to control the temperature. The electric heating method is adopted, the outer shell is cold sprayed with electrostatic spraying, the inner tank is made of stainless steel, the insulation layer is made of asbestos as the insulation material, and a heating tube is provided at the bottom. The uniformity is relatively poor, and the temperature impact is relatively high. It is mainly composed of cabinet, heater, blower and temperature controller.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Constant Temperature Incubator market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
