Abstracts

Contract research organization (CRO) provide clinical trial and other research support services for the pharmaceutical, biotechnology, medical device industries and also serve government institutions, foundations and universities.

CROs provide drug development services, regulatory and scientific support, and infrastructure and staffing support to provide their clients with the flexibility to supplement their in-house capabilities or to provide a fully outsourced solution. The CRO industry has grown from providing limited clinical trial services in the 1970s to a full service industry characterized by broad relationships with clients and by service offerings that encompass the entire drug development process. Today, CROs provide a comprehensive range of clinical services, including protocol design and management and monitoring of Phase I through Phase IV clinical trials, data management, laboratory testing, medical and safety reviews and statistical analysis. In addition, CROs provide services that generate high quality and timely data in support of applications for regulatory approval of new drugs or reformulations of existing drugs as well as new and existing marketing claims. CROs leverage selected information technologies and procedures to efficiently capture, manage and analyze the large streams of data generated during a clinical trial.
