Abstracts

This report studies the global Copper Chromated Arsenic market status and forecast, categorizes the global Copper Chromated Arsenic market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Chromated copper arsenic (CCA), is a waterborne wood preservative introduced into wood by pressure impregnation. The active ingredients are chromium (47.5%), arsenic (34.0%) and copper (18.5%). The extraordinary effectiveness of CCA as a wood preservative lies in the combined action of these three elements. Copper, acts as a fungicide; arsenate, a form of arsenic, is an insecticide; and chromium, binds the ingredients to the wood.

CCA is one of the world's most popular wood preservatives, in use for more than 75 years. As a water-borne preservative, it offers timber long-term protection against attack by wood-destroying fungi, insect larvae and termites. It is applied by impregnation into the timber by vacuum pressure at a timber treatment plant. CCA can be used for hazard classes H1 to H5.

Due to environmental factors, CCA has been banned to be used in some residential wood products. After related policies in European and North American regions, CCA market has narrowed largely. North America is the largest production base of chromated copper arsenic for the time being. In 2016, North American chromated copper arsenic production reached to 9556 MT, holding about 58.12% market share globally.

As for consumption, North America, Oceania, Oceania are the major consuming regions. The three regions consumed about 5849 MT, 4663 MT and 3403 MT respectively, with a total consumption share of 84.63% in 2016.

The global Copper Chromated Arsenic market is valued at 60 million US\$ in 2017 and will reach 55 million US\$ by the end of 2025, growing at a CAGR of -1.3% during 2018-2025.
