Abstracts

Coronary artery bypass surgery, also known as coronary artery bypass graft (CABG) surgery, and colloquially heart bypass or bypass surgery, is a surgical procedure to restore normal blood flow to an obstructed coronary artery. A normal coronary artery transports blood to and from the heart muscle itself, not through the main circulatory system.

According to QYResearch's new survey, global Coronary Artery Bypass Grafts Products market is projected to reach US\$ 153.4 million in 2029, increasing from US\$ 128.5 million in 2022, with the CAGR of 2.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Coronary Artery Bypass Grafts Products market research.

The coronary artery bypass grafts (CABG) device market is driven by the increasing prevalence of coronary artery disease (CAD) and the growing aging population worldwide. CABG procedures are a widely adopted treatment option for patients with severe CAD, aiming to restore blood flow to the heart muscles. The rise in lifestyle-related risk factors such as obesity, hypertension, and diabetes contributes to the escalating prevalence of CAD, which fuels the demand for CABG devices. Moreover, advancements in medical technology and surgical techniques have led to improved outcomes and shorter recovery times, making CABG a preferred choice for patients. However, challenges include the high costs associated with CABG procedures, which can limit accessibility for certain patient groups. Additionally, minimally invasive alternatives such as percutaneous coronary intervention (PCI) compete with CABG procedures, impacting market growth. Finding a balance between traditional CABG

procedures, minimally invasive alternatives, and cost-effective solutions will be crucial for the continued success of the CABG device market.
