## Abstracts

Cortical surface intracranial electrodes identify clinically relevant seizures missed on scalp EEG after traumatic intracranial hemorrhage.

According to QYResearch's new survey, global Cortical Surface Electrode market is projected to reach US\$ 36 million in 2029, increasing from US\$ 26 million in 2022, with the CAGR of 5.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Cortical Surface Electrode market research.

The intracranial electrode market is driven by the increasing prevalence of neurological disorders such as epilepsy and the growing demand for accurate brain mapping and monitoring techniques. Intracranial electrodes play a pivotal role in diagnosing and treating these disorders by recording brain activity and facilitating precise localization of abnormal neural signals. As advancements in medical technology continue, the market benefits from improved electrode designs, enhanced biocompatibility, and higher resolution recording capabilities. Additionally, the rise of neuromodulation therapies, including deep brain stimulation, further propels market growth. However, challenges persist, including the need for minimally invasive implantation techniques to reduce patient discomfort and risks of infection. Ethical considerations and patient consent requirements also add complexity to the market landscape. Successful stakeholders in the intracranial electrode market must address these challenges while delivering safe, effective, and innovative solutions that aid in the accurate diagnosis and treatment of neurological disorders.
