High frequency infrared CS analyzer is optioned with the use of high frequency induction furnace, it can quickly and accurately determine the mass fraction of carbon and sulfur in steel, iron, alloy, nonferrous metals, cement, ore, glass and other materials.

High frequency infrared CS analyzer is a kind of high-tech equipment supported by optical, mechanical, electrical, computer and analysis technology. It has advantages such as wide measurement range, accurate and reliable analysis results. Currently, the output volume of high frequency infrared CS analyzer in China accounts about 40 percent of the global total output volume of high frequency infrared CS analyzer. And it is believed that the production market share of China in the global high frequency infrared CS analyzer industry will be larger in the future. However, the performance of high frequency infrared CS analyzer produced by Chinese manufacturers are not that good as similar products made by Germany manufacturers, to be objective.

There are more than a dozen of manufacturers of high frequency infrared CS analyzer in China currently, the competition of this market is fierce. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field. Although sales of high frequency infrared CS analyzer may bring a lot of opportunities, the study group recommends that new entrants those just have money but without technical advantage and downstream support do not enter into the high frequency

infrared CS analyzer field.
