Abstracts

Daminozide (CAS 1596-84-5) is a white solid with the molecular formula $C_6H_{12}N_2O_3$. It can inhibit plant growth and promote shortness without affecting flowering and fruiting.

According to QYResearch's new survey, global Daminozide market is projected to reach US\$ 29 million in 2029, increasing from US\$ 21 million in 2022, with the CAGR of 4.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Daminozide market research.

Daminozide (also known as Alar) is a plant growth regulator that inhibits cell division and promotes dwarfing effects in plants. Despite being widely used in agriculture and horticulture over the past few decades, Daminozide has faced competition from certain restrictions and alternative products in recent years. With increasing concerns about food safety and environmental impact, there is a growing demand for novel growth regulators, which could impact the market size and direction of Daminozide. In the future, the Daminozide market is likely to evolve towards more environmentally friendly, efficient, and sustainable options, integrating with new technologies and research advancements to offer greater choices for agricultural and horticultural practices.
