Abstracts

After sodium chloride is dissolved in snow, its freezing point is -10° below zero, and the freezing point of salt water is lower than that of water, so it is difficult to form ice after salt is dissolved in snow water. In addition, after the melting agent is dissolved in water, the concentration of ions in water increases, so that the liquid vapor pressure of water decreases, but the solid vapor pressure of ice remains unchanged.

According to QYResearch's new survey, global De-icing Sodium Chloride market is projected to reach US\$ 62 million in 2029, increasing from US\$ 52 million in 2022, with the CAGR of 2.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole De-icing Sodium Chloride market research.

The future of the high-performance material market looks promising with opportunities in the construction, automotive, electrical, and food & beverages applications. The global high-performance material market is expected to grow with a CAGR of 9% to 11% from 2023 to 2029. The major drivers for this market are high-quality components demand from designers are increasing, rising demand in end-use sectors, and increasing number of manufacturers and suppliers in the fluid handling industry.
