Abstracts

Dental Radiography Systems refers to the imaging equipment which use the radiography principle and used in the dental field. Dental Radiographs are commonly called x-rays. Dentists use radiographs for many reasons: to find hidden dental structures, malignant or benign masses, bone loss, and cavities.

A radiographic image is formed by a controlled burst of X-ray radiation which penetrates oral structures at different levels, depending on varying anatomical densities, before striking the film or sensor. Teeth appear lighter because less radiation penetrates them to reach the film. Dental caries, infections and other changes in the bone density, and the periodontal ligament, appear darker because X-rays readily penetrate these less dense structures. Dental restorations (fillings, crowns) may appear lighter or darker, depending on the density of the material.

In this report, Dental Radiography System includes Ordinary Radiography Systems, Panoramic Radiography Systems and Cone-beam computed tomography systems (CBCT).

Asia-Pacific is poised to grow at the highest CAGR during the forecast period owing to rising awareness about oral health care, increasing disposable income in this region, and rising focus of prominent players on the APAC market increasing product availability.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Dental Radiography Systems market in 2020.
