Abstracts

SLS (Selective Laser Sintering) is a 3D printing technology that uses a laser beam to sinter powdered material. This technique enables the 3D printing of detailed functional parts and prototypes. Five to ten years ago, SLS technology was exclusive to large, industrial additive manufacturing systems. In recent years, a more compact SLS 3D printer niche has been slowly emerging, with lower prices and office-friendly formats.

According to QYResearch's new survey, global Desktop SLS Printer market is projected to reach US\$ 1144.2 million in 2029, increasing from US\$ 632 million in 2022, with the CAGR of 8.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Desktop SLS Printer market research.

3D printing, also known as additive manufacturing, is a manufacturing method based on a digital model file, using powdered metals, plastics and other materials to lay out the print layer by layer, and finally form a three-dimensional object. Currently, it has been gradually applied in industrial design, aerospace, construction, medical and other fields to print models, parts and even final products. According to our research, the global 3D printing market size is about \$15.3 billion in 2022, with the highest share coming from 3D printing services. The industry that uses 3D printing the most is the automotive industry, which is a distant second, followed by the consumer/electronics sector and aerospace. The current global 3D printing head players are mainly concentrated in the US.
