## Abstracts

Diamond wire cutting (DWC) is the process of using wire of various diameters and lengths, impregnated with diamond dust of various sizes to cut through materials. Because of the hardness of diamonds, this cutting technique can cut through almost any material that is softer than the diamond abrasive.

A 'diamond wire' is a tool used to thinly slice rectangular silicon ingots that are pre-cut to the dimensions of each wafer. It is a threadlike slicing tool made with a thin piano wire with diamond granules firmly attached and is thinner than a human hair.

Under the background of slower economy growth rate, companies face high risks of profit decline. Currently, China's electroplated diamond wire industry maintains a rapid growth, and electroplated diamond wire market in Europe, USA and Japan has a certain potential. The demand in these areas is relatively stable.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
