Abstracts

Diaphragm Coupling consists of several groups diaphragm (stainless steel sheet) staggered bolt connection with two coupling halves, each diaphragm is made from several pieces stacked set, the diaphragm is divided into different shapes-link and the entire piece. Diaphragm coupling by the elastic deformation of the diaphragm to compensate for the relative displacement of the two axes Union is a strong component of high-performance metal flexible coupling, do not run oil, more compact structure, high strength, long service life, no rotation gap, independent of temperature and oil slicks, with acid and alkali corrosion, suitable for high-temperature, high-speed, a corrosive medium conditions environment shaft drive.

As the diaphragm coupling market in developed countries is getting matured, the markets in developing countries such as China and India are estimated to grow at a higher rate from 2015 to 2020. China is estimated to grow faster than any other country. This is because of the high population in the country along with new constructions coming up in the future few years.
