Abstracts

Dicapryl Phthalate(DCP) (CAS 131-15-7) is a colorless and transparent oily liquid with a molecular formula of C₂₄H₃₈O₄. It has good heat resistance, light resistance and viscosity stability, can be used instead of DOP, especially suitable for plastic paste. It is widely used in cable strips, floor leather, etc.

According to QYResearch's new survey, global Dicapryl Phthalate(DCP) market is projected to reach US\$ 45 million in 2029, increasing from US\$ 33 million in 2022, with the CAGR of 5.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Dicapryl Phthalate(DCP) market research.

Dicapryl Phthalate (DCP) is a commonly used plasticizer, widely used in areas such as plastic products, coatings, adhesives, rubber, and medical devices. As industries such as plastics, construction, and automotive experience rapid growth, the market for DCP has been expanding. In recent years, increasing environmental awareness and stricter regulations have led manufacturers to seek more environmentally friendly and sustainable alternatives, posing some challenges to the DCP market. However, DCP continues to play a significant role in certain sectors like flexible PVC, coatings, and plastics. It is expected that with the development of new material technologies, DCP will maintain stable demand in specific areas, while also requiring innovation to adapt to market changes. Overall, the DCP market is expected to maintain a certain size while also focusing on sustainable development and environmental trends.
