Abstracts

A turbocharger consists of two main components, which are the turbine and the compressor. The turbine comprises a turbine wheel and turbine housing. A turbocharger features a compressor wheel and exhaust gas turbine wheel coupled together by a solid shaft, which is used to boost the intake air pressure of an internal combustion engine. The industrial diesel turbocharger market is driven by factors such as the increasing energy demand and rapid developments in the marine industry. However, high maintenance and operational costs are expected to restrain market growth. The growing demand for industrial diesel turbocharger across emerging economies is expected to create growth opportunities for market players.

According to QYResearch's new survey, global Diesel Turbocharger market is projected to reach US\$ 14530 million in 2029, increasing from US\$ 10160 million in 2022, with the CAGR of 5.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Diesel Turbocharger market research.
