Abstracts

Diethyltelluride (CAS 627-54-3) is a dark yellow liquid with a molecular formula of $C_4H_{10}Te$. It is an organometallic compound that can be used to prepare infrared detection materials. It is also a tellurium source for the preparation of $CdHgTe$, and it can also be used to prepare tellurium-containing semiconductor compounds from II to VI groups.

According to QYResearch's new survey, global Diethyltelluride market is projected to reach US\$ 14 million in 2029, increasing from US\$ 11 million in 2022, with the CAGR of 3.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Diethyltelluride market research.

Diethyltelluride, an important organic tellurium compound, holds significant potential applications in sectors such as semiconductor and photovoltaic industries. With the rapid growth of the semiconductor sector and the increasing demand for efficient energy sources, Diethyltelluride is gaining attention as a potential semiconductor and photovoltaic material. The current market size is relatively modest, but with ongoing breakthroughs in renewable energy technologies and process improvements, Diethyltelluride's market outlook is promising. In the future, as the semiconductor and photovoltaic industries continue to advance, the market for Diethyltelluride is expected to expand gradually, potentially playing a larger role in emerging technology domains.
