Abstracts

Diethylzinc ($(C_2H_5)_2Zn$, or DEZ, CAS Number: 557-20-0, is a highly pyrophoric organozinc compound consisting of a zinc center bound to two ethyl groups. This colourless liquid is an important reagent in organic chemistry and available commercially as a solution in hexanes, heptane, or toluene.

Diethylzinc industry concentration is high; most of the manufacturers are in Europe and USA, AkzoNobel is the largest manufacturer in the Europe with annual capacity of 1200 MT in 2015. Other important suppliers are Albemarle, Chemtura Corporation. Due to policy and the recession of photovoltaic industry, the production of diethylzinc will reduce to 765MT in 2016 from 897MT in 2011. In addition, the market demand is also reduced.

In consumption market, the Europe consumption of diethylzinc increases with the -4% average growth rate. Europe, USA and China are the mainly consumption regions due to the bigger demand of downstream applications. In 2015, Netherlands, Germany, United Kingdom and France occupied 80% of the Europe consumption volume in total. With high purity effect of diethylzinc, the downstream application industries will need more diethylzinc products. So, High pure diethylzinc for pharmaceutical industry has a big market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance diethylzinc through improving technology. The major raw materials for diethylzinc are zinc, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of diethylzinc. The production cost of diethylzinc is also an important factor which could impact the price of diethylzinc. The diethylzinc manufacturers are trying to reduce production cost by developing production method.

We tend to believe this industry is a recession industry, and the consumption decreasing degree will show a smooth growth curve. In past five years, the price presents decreasing trend according to the economy development status and international competition. Also, there is decreasing trend in gross margin. Since the COVID-19 virus outbreak in December 2019, the disease has spread to

almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Diethylzinc 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Diethylzinc 3900 industry.

Based on our recent survey, we have several different scenarios about the Diethylzinc 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019. The market size of Diethylzinc 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
