Abstracts

Digital Radiography is the electronic capture of an X-ray exposure. The exposure is captured in a device that converts the X-rays to a digital signal, which is then represented on a viewing monitor for diagnosis. An image from a Digital X-ray System that appears on a viewing monitor may have come from one of two technologies, namely Computed Radiography (CR) and Direct Digital Radiography (DR/ DDR). The Digital Radiography consumption volume was 21349 Units in 2016 and is expected to reach 23241 Units in 2017 and 34944 Units in 2022, growing at a CAGR of 8.49% from 2017 to 2022. Since 2016, China has been the largest consumption market of digital X-ray system, with shipments of about 5 thousand units. North America and Europe are still the most important market of digital x-ray system, but the consumption growth rate in Asia-Pacific and other emerging market is forecasted to be higher in the following years.

Currently, there is still great market potential for digital x-ray system, as the penetration rate of digital x-ray system is still not that high, especially in developing countries such as China, India, Brazil and etc. But it is forecasted that the growth rate of digital x-ray system may not keep not fast in the following years, after the penetration rate of digital x-ray system get reasonable level; what can not be ignored is that conventional x-ray system will disappear, conventional x-ray system still has a lot of advantages.

The manufactures of Digital Radiography are concentrated in Japan and North America. Europe is still the largest production area in the world, which occupied about 26% in 2016. The following areas are North America. As the design and manufacturing technology of digital x-ray system is quickly getting more and more mature, the manufacturers in developing countries, especially China, is actively competing in the market with low-cost products. And the price of digital x-ray system is reducing year by year, which is also a market driving factor.

Despite the presence of competition problems, due to the increasing demand of leading-

edge, effective products and the development of downstream industry area, investors are still optimistic about this area, investors are still optimistic about this area, the future will still have more new investment enter the field. In the next five years, the consumption volume will keep increasing, as well as the consumption value. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Digital Radiography 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Digital Radiography 4900 industry.

Based on our recent survey, we have several different scenarios about the Digital Radiography 4900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 3324.2 million in 2019. The market size of Digital Radiography 4900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
