Abstracts

Dimethylamine is an organic compound with the formula $(\text{CH}_3)_2\text{NH}$. This secondary amine is a colorless, flammable gas with an ammonia-like odor. Dimethylamine is commonly encountered commercially as a solution in water at concentrations up to around 40%.

First, the dimethylamine industry concentration is high; China is the biggest producer and consumer of DMA. There are no more than one hundred manufacturers in the world, and high-end products mainly come from America and western European. In the world wide, giant manufactures mainly distribute in China. The manufactures of DMA are located in China, production reached 176400 MT in 2015. American and Europe has a long history and unshakable status in this industry, like BASF and Eastman Chemical, both have perfect products. Asia companies Hualu Hengsheng and Mitsubishi are also important player in this market.

Second, many company have several plants, usually close to aimed consumption market. Hualu Hengsheng and Jiangshan Chemical are typical manufacturers that aiming at Zhejiang market and Shandong Market. Some company usually take a joint venture enter into aim market, like BASF-YPC is a joint venture of BASF and Sinopec, which locates in Jiangsu province.

Third, all manufactures in the world are committed to the improvement of product. These two years, some Chinese manufactures can almost catch up with the world's leading technology too.

Fourth, the import and export percent of this industry is low. Since the supply of DMA in China is more than demand, China has to export more than 800 KMT products to other area. Also, foreign companies are willing to buy Chinese products due to its low price.

Fifth, this industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more people pay attention to rising environment standards, especially in

underdevelopment regions that have a large population and fast economic growth, the need of DMA will increase.

Sixth, we tend to believe this industry now is close to mature, and the consumption increasing degree will show a smooth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Dimethylamine 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Dimethylamine 3900 industry.
