Abstracts

Trichloroisocyanuric Acid is a kind of organic compound. It is a white crystalline powder or granular solid, and has a strong chlorine pungent taste. Trichloroisocyanuric Acid is easy to decompose in acid or alkali. Trichloroisocyanuric Acid bactericidal performance is excellent. It becomes the new generation of broad spectrum, high efficiency, and low toxicity fungicides, bleach and shrink agent.

According to QYResearch's new survey, global Disinfectant Trichloroisocyanuric Acid market is projected to reach US\$ 1917.1 million in 2029, increasing from US\$ 1533.8 million in 2022, with the CAGR of 3.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Disinfectant Trichloroisocyanuric Acid market research.

A new publication on trends in the water market has estimated that the global water treatment market is projected to grow at a compound annual growth rate of some 7% per year in the period 2023-2028. In 2022, the water treatment market was valued at US \$ 303 billion, and it is projected to grow to US \$ 460 billion by 2028. This growth is driven amongst others by the continuing trend of urbanisation: currently, 57% of the world population lives in urban areas, and the average annual growth rate of urban populations is 4.4% due mostly to the fact that some 80% of the world's GDP is produced in urban areas. Beyond this, however, total global water demand is expected to grow by between 20-30% by 2050, increasing pressure on available resources and placing a premium on the value of treated wastewater. Increasing freshwater scarcity in some regions, the rapid growth in emerging markets, rising concerns around environmental degradation, increasing by companies in advanced wastewater treatment technology and growing emphasis on water quality and public health, are all factors

contributing to the rise in demand for water treatment services. Governments are introducing increasingly stringent laws and regulations related to both water quality and pollution, and are developing medium and long term policies requiring the expansion of water treatment facilities.
