Abstracts

Dispensing machines are used in all areas of industry where mixing of liquids or liquids with solids is required. A disperser will generate the shear force necessary to rapidly de-lump powders in a liquid. This de-lumping process is called dispersion. A disperser is a high-powered, low volume pump. Considering its substantially higher horsepower per gallon requirement, a disperser is an inefficient mixer.

In the coming years there is an increasing demand for Dispersion Machine in the regions of Europe and Japan that is expected to drive the market for more advanced Dispersion Machine. Growth in government budgets in the principal countries, increasing of medical treatment expenditures, more-intense competition, launches in introducing new products, increasing of spending on daily chemical industry, retrofitting and renovation of old technology will drive growth in Europe and Japan markets. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Dispersion Machine 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
