The Docks market, in computing and video gaming, is a docking station or dock provides a simplified way of 'plugging-in' an electronic device such as the tablet-like hybrid video game console, the Nintendo Switch and laptop computer to common peripherals. Because a wide range of dockable devices—from mobile telephones to wireless mice—have different connectors, power signaling, and uses, docks are not standardized and are therefore often designed with a specific make and model of a device in mind.

A dock can allow some laptop computers to become a substitute for a desktop computer, without sacrificing the mobile computing functionality of the machine. Portable computers can dock and undock hot, cold or standby, depending on the capabilities of the system. In a cold dock or undock, one completely shuts the computer down before docking/undocking. In a hot dock or undock, the computer remains running when docked/undocked. Standby docking or undocking, an intermediate style used in some designs, allows the computer to be docked/undocked while powered on, but requires that it be placed into a sleep mode prior to docking/undocking.

Currently, The industry is highly concentrated, technical barriers and financial barriers are relatively high. The companies in the world that produce Docks mainly concentrate in North America and China, Raw materials are also concentrated in these regions. In particular, as the market leader in Docks, Acer and Apple take the global market share of more than 35%, other key manufacturers include Dell, HP, Lenovo, etc. The production of Docks increased from 27424.6 K Units in 2012 to 36829.7 K Units in 2016, with an average growth rate of 8.57%.
