## Abstracts

Drum brakes work on the same principle as disc brakes: Shoes press against a spinning surface. In this system, that surface is called a drum.

Many cars have drum brakes on the rear wheels and disc brakes on the front. Drum brakes have more parts than disc brakes and are harder to service, but they are less expensive to manufacture, and they easily incorporate an emergency brake mechanism.

China is the largest production country with the production market share 28% in 2015. Because most of the big multinational manufacturers have their plants in China, and there are also many local manufacturers in China.
