## Abstracts

This report studies the global Dry Powder Inhaler Device market status and forecast, categorizes the global Dry Powder Inhaler Device market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

A dry powder inhaler (DPI) is a device that delivers medication to the lungs in the form of a dry powder. DPIs are commonly used to treat respiratory diseases such as asthma, bronchitis, emphysema and COPD although DPIs (such as inhalable insulin Afrezza) have also been used in the treatment of diabetes mellitus.

The global total sales of dry powder inhaler device is nearly 49674 K units in 2015.

As a high tech industry, the manufacturing technology of Dry Powder Inhaler Device is mature but only these international giants can supply the high-end products with excellent performance. There is still a core technical barrier.

Today, the price of Dry Powder Inhaler Device is lower than past years. The reason for this downward trend of price is the development of technology and the price fluctuations of raw materials. In future, the price would go down continuously and slowly.

The global Dry Powder Inhaler Device market is valued at 640 million US\$ in 2017 and will reach 900 million US\$ by the end of 2025, growing at a CAGR of 4.9% during 2018-2025.
