## Abstracts

A dry transformer is popularly known as a cast resin transformer, in which windings are encapsulated in epoxy resin. Dry transformers are easy to install since they do not require any oil for cooling and are completely dry. Additionally, they need not be kept in a fireproof vault. The protective epoxy coating keeps it dust and rust-free. Dry-type transformers can be installed indoors or outdoors and are suited for a wide range of applications, such as oil & gas, mining, and marine. Also, dry-transformers are often used in applications involving low and medium voltages.

According to QYResearch's new survey, global Dry Transformer market is projected to reach US\$ 9820 million in 2029, increasing from US\$ 5836 million in 2022, with the CAGR of 7.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Dry Transformer market research.
